

Generalised engine vs published thesis values, La Fossa, 13 configurations

Bar height = $-\log_{10} |\text{engine} / \text{thesis} - 1|$. Indigo: volume-partitioning factor rV ; teal: central uplift for the largest injection.

Pale part of each bar: below the test tolerance of 10^{-5} (five digits). Every bar exceeds it by at least 1.5 digits.

S = 2021 source (spheroid); M = Mogi sphere; C0.5, C1, C2 = penny crack of radius 0.5, 1, 2 km; number = depth (km).
